Marketing Principles Revision Notes

Core marketing concepts, models and exam-ready application in a compact revision format.

How to use these notes

Start with the key definitions, then use the tables/diagrams to connect ideas. Finish with the exam checklist. The aim is high information density: short wording, clear concepts, no filler.

1. Marketing foundations

Marketing identifies, anticipates and satisfies customer needs profitably. The central idea is **value**: customers compare perceived benefits with the money, time and effort required.

Need / want	Need = basic requirement; want = preferred way to satisfy it.	Helps explain demand and positioning.
Market orientation	Decisions begin with customer/competitor research.	Reduces risk of producing unwanted products.
Product orientation	Focus on product quality/innovation first.	Can work in technical markets but risks ignoring customers.
Segmentation	Split a market into groups with similar needs/behaviour.	Allows more relevant targeting.

2. STP: segmentation, targeting, positioning

- Segmentation bases: demographic, geographic, psychographic and behavioural.
- Targeting: assess segment size, growth, profitability, accessibility and strategic fit.
- Positioning: create a clear place in the customer's mind versus competitors; often summarised through a value proposition.

3. Marketing mix (4Ps)

Product	Features, quality, branding, packaging, product life cycle.
Price	Cost-plus, penetration, skimming, competitive, psychological pricing.
Place	Direct vs intermediaries, online/offline, logistics, channel coverage.
Promotion	Advertising, sales promotion, PR, direct/digital marketing.

Exam application

Do not just list the 4Ps. Link each choice to the target market, competition, objectives and likely effect on demand/profit.

4. Product life cycle

Introduction	Low sales, high launch cost.	Build awareness; selective distribution.
Growth	Rapid sales/profit growth.	Expand distribution; differentiate.
Maturity	Slower growth; intense competition.	Modify product/market; defend share.
Decline	Falling sales.	Harvest, reposition or withdraw.

5. Research and metrics

Primary research is collected first-hand for the current problem; secondary research already exists. Quantitative data measures patterns numerically; qualitative data explores reasons and attitudes.

Key measures: market share = $\text{firm sales} / \text{total market sales} \times 100$. Conversion rate = $\text{conversions} / \text{visitors} \times 100$.

Customer acquisition cost = $\text{marketing/sales spend} / \text{new customers}$.

Exam-ready checklist

- Define segmentation, targeting and positioning accurately.
- Apply each of the 4Ps to a specific business context.
- Distinguish primary/secondary and quantitative/qualitative research.
- Explain one advantage and limitation of market orientation.
- Use a metric such as market share or conversion rate in context.

Fast recall

If you cannot explain a concept in one or two sentences without looking, revisit that section. Aim to recall the definition, mechanism and one example.

Uni Notes keeps revision focused: concise explanations, useful detail, and diagrams only where they improve understanding.
